

HTC

Diamond Transitional tools

For unparalleled transition

The revolutionary way to achieve the perfect floor in less time without compromising on quality.

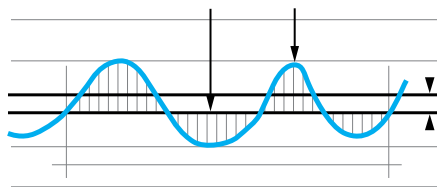

The new DT 3 & 5 tools have unsurpassed scratch removal ability which enables the operator to move safely between metal and resin tooling, but also make it possible to skip grinding steps. To ensure a perfect end result, the DT tools are optimized for hard and extra hard concrete, where it is essential for the contractor to remove scratches from the initial metal bond grinding steps.

DT 3 HX - Item no: 213340-3A

DT 5 HX - Item no: 213340-5A

Surface refinement control

The end result of a grinding process is often not visible until the last polishing step is done. At HTC we use surface roughness measurements during the development to monitor and verify that the surface created by the tools is of the highest possible quality. Feel confident in the fact that you will be getting a tool that has been tested in the most challenging environment.

Why should you use HTC Diamond Transitional tools?

- Ensure a smooth transition between metal and resin bond diamond tools. Remove scratches effectively.
- Save time and money by skipping grinding steps during the process due to DT's supreme surface refinement capabilities.
- Developed for hard and extra hard concrete
- Two grits available; DT3 (40) and DT5 (150 grit).
- Velcro based mounting - fits most grinding machines with ease.
