# HTC Twister™ Ceramic Tiles floor guide

## Material

Ceramic is a hard, brittle, heat-resistant and corrosion-resistant material made by firing a non-metallic mineral, such as clay, at a high temperature.

## Characteristics:

Tiles available in a wide range of colours with either a semi or high gloss polished surface. Classified as a very hard, durable and chemical resistant floor material.

## Availability:

Commonly found in public areas, stores and supermarkets.

## TWISTER on Ceramic tiles:

TWISTER is effective as a maintenance method to keep Ceramic tiles clean without strong chemicals. After long time use a slight improvement of gloss will occur but generally ceramic tiles will not polish. Any specific TWISTER programs are not recommended, use only for daily cleaning.

## Description/how to recognize

Inorganic material, clay processed at high temperature.

## Attributes/softness

Hard

## How to use Twister

Daily cleaning with Green TWISTER.

Depending of the quality of the tiles the upgrade program will have an effect on the floor. In most cases a more clean and light tile will be the result and in some cases the gloss will improve.

## Expected result/tips and tricks

Good cleanliness. Limited improvements regarding shine.
