

HTC

Protective cover

Protection for upper drive belt

Increase the life of your HTC machine! Protect the upper drive belt.

HTC continues to develop its machines. This cover protects the upper belt, which is vulnerable to abrasion from dust and particles that collect around the belt. This protection increases operating hours and reduces the need for servicing.

- More robust and hardwearing machine
- Reduced need for servicing
- Increased reliability
- Easy fitting
- Fits all models that use hub technology

Reduced need for servicing

The new cover protects your machine against breakdowns and means better economy through reduced need for servicing.

Once again HTC demonstrates that we never stop developing and improving our machines!
