## Greyline™ Superprep™ series

### Aggressive floor prep

## An aggressive tool series to an even more aggressive price.

**The new Greyline Superprep tools are aggressive in many ways. With developed matrix technology we have managed to create extremely aggressive tools to an even more aggressive price.**

The new tool series have three different tools where the **GL Superprep 0** is available in two different versions, one for hard concrete (HC) and one optimized for soft concrete (SC).

The two coarsest steps in the GL Superprep series contain a mix of crushed PCD and diamonds to give a high cut rate. The tools are great for various floor prep tasks including removal of coatings, asbestos, glue or any other residue.

The biggest surprise might be the price, from €32 per tool, list price. Contact your HTC dealer today to order your first GL Superprep tool.

PRICE FROM  
**€32**
