

HTC - the Innovators, not the imitators!

HTC Grouting

Pores and cracks filling system

HTC introduce a new system which simplifies pores and cracks filling during the HTC Superfloor™ process.

HTC Grouting is a new product which is used to satisfy high demands for a pore free surface. The product is used in the grinding process together with dust from grinding which creates an excellent pore free and dense surface.

- Creates a pore free and homogeneous surface
- Counteracts penetration of dirt
- Increase the gloss value of the floor
- Gives the floor an extended durability
