

Dust extractors

Dust extractors – dust collection

Everyone looks for ways to improve their business and make it more profitable. But a chain is never stronger than its weakest link. The core focus for HTC is to keep developing the ultimate flooring system. We believe in a system where all parts are made to match, all the way from the tools to the grinder and finally, the dust extractor.

For efficient dust collection a competent dust extractor is required. HTC's dust extractors comes in several sizes, ranging from the handy HTC GL 25 D to the powerful, remote controlled HTC 80 iD. Dust collection is a crucial part of the grinding process, from the health point-of-view but also to prevent surrounding areas being filled with dust.
