

BB Series

For transitioning between metals and resins

Our Big Block series simplifies the transition from metal bond to resin bond tools. It is very aggressive on lower grits and easily removes scratches after step 2 and 3 metal bond tools. Thanks to its big size it also leaves a more uniform scratch pattern compared to our very popular SR-tool which helps speeding up the grinding process. We also offer some specifically developed resin bond tools such as the HTC BBX2 that can be used with advantage as the first step on marble, terrazzo and limestone as well as on hard concrete.

- Includes the latest grinding tool technology
- Up to 30% extended life compared to similar tools on the market
- High cutting rate
- More uniform scratch pattern
- Speeds up the grinding process

EZ BBX 2 Gold - 25 grit

Item Number: 593328601

BBX2 is a very aggressive resin tool for the first grinding step. It can be used with advantage as the first step on marble, terrazzo and limestone. BBX2 is a continuation of the BB series, now with a unique technology enabling the use of coarse diamonds in a composite diamond tool. BBX2 is strongly recommended together with our Diamond Xpress series. With this combination it is now possible to completely dry-process marble, terrazzo and limestone, without having to use water.
