

## Resin tools

- Resin-bond diamond tools for floor polishing

HTC's resin-bond diamond tools are many times used after the use of metal-bond diamond tools for floor polishing. However, in some cases a resin-bond diamond tool can be used as a starting tool on smooth flat floors. HTC's Resin Bond Tools have been specially developed to suit all purposes, ranging from grinding/polishing of concrete, screed terrazzo, granite and marble to wood grinding. For all resin bond tools we recommend our elastic tool holders for optimum result.

### Soft floors

Floors of loose or porous material. A high rate of removal is achieved with these floors, but with higher tool wear.

### Medium-hard floors

Normal building concrete. This includes marble and terrazzo floors.

### Hard floors

Usually refers to steel trowelled floors or certain types of cement. This includes granite. The floors usually require "soft" segments.
